

Expertise

DoseVue focuses on the development of technology for systematic in-vivo dosimetry for patients in radiation therapy and in radiology. Our technologies allow non-invasive or minimally invasive dose measurements along a point, a surface or a volume.

Target

We target the market of radiation therapy and radiology. Within radiation therapy, we are developing specific solutions for hypo-fractionated treatments. As for radiology, we initially target complex interventional procedures.

Major projects/partnerships/collaborations

We are setting up collaboration with several hospitals, across Europe. Among them: Iridium Kankernetwerk (Belgium), Institut Gustave Roussy (France), Centre Antoine Lacassagne (France), Istituto Nazionale dei Tumori (Italy), Policlinico Gemelli (Italy), San Raffaele Hospital (Italy) and Mastro clinic (Maastricht).
