

Spin-off from the Electrical Engineer department of the Université Catholique de Louvain (UCL), Intuitim is specialized in the development of expert software for image based medical diagnosis and planning. Our solutions are focused on the user experience, providing intuitive interfaces to lower the burden of medical specialists and assistants and to allow structured reporting.

Expertise

- Medical imaging & medical data management
- Image processing algorithms
- Structured and standardized “on-image” annotation tools
- Customized intuitive user interface and workflow

Target

- Medical & research centers using imaging (any modality)
- Specialists who use medical imaging, from radiologists to surgeons
- Clinical research (trials)

Major projects/partnerships/collaborations

- An intuitive interface to annotate digital mammography enforcing use of BIRADS thesaurus for breast cancer screening program and follow-up.
- A tool for 3D maxillo-facial surgery planning and simulation using either CT-Scan or low dose CB-CT.
- Multi-modality image registration platform for oncology and nuclear imaging.

Key facts

- Founded in 2012, Intuitim is ideally located in Brussels, close to several hospitals and universities.
- ISO 13 485 and ISO 9001 certified
