

IRE ELiT, the Institute for Radioelement subsidiary, created in 2010, is an innovative radiopharmaceutical company that develops, produces and commercializes new, ready to use and premium solutions for **diagnostic and therapeutic agents in Nuclear Medicine**.

Beside the production of radiopharmaceuticals, IRE ELiT, through the business unit “Services”, provides service activities relating to the environmental protection, technical expertise and waste management.

At IRE- IRE ELiT, we attach great importance to the human dimension of the business. The quality of social relations within the business is crucial and based on transparency and mutual respect. We manage the business on the basis of five fundamental values: team spirit, innovation, responsibility, competence and partnership.

Expertise

Unlike radiochemical production, IRE ELiT’s radiopharmaceutical products can be administered directly to patients thanks to an additional sterilisation phase.

At the current stage, the radiopharmaceutical activities are focussed on the production of the new Ge-68/Ga-68 generator, Galli Eo™, that contributes to open new fields of high definition imaging procedures in nuclear medicine and oncology, particularly for NET (neuro endocrine tumors), prostate and breast cancers where development and availability of new 68Ga-agents, have increased drastically during last years. This application is the culmination of a major effort made by the company to propose a new generation Gallium-68 generator which, thanks to its innovative design, facilitates the use of Gallium-68 in PET imaging, in full compliance with nuclear and pharmaceutical safety standards, for the benefit of patients and users.

Steeped in the corporate culture, IRE ELiT places quality, reliability and services at the center of all its concerns to secure the supply and easy use for our customers worldwide.

Target

IRE ELiT, due to the nature of the product, is directly dealing with users of the product: radiopharmacists, nuclear medicine specialists, oncologists, and other pathology specialists (endocrinologist, hepatologist...). The presence of IRE ELiT in the global market is ensured by an extensive distribution network: Isologic for Canada - Monrol for Turkey - GMS for Australia & Honk Kong - Curium for UK & Germany - Sam Nordics for Denmark, Finland, Norway & Sweden - Med Atlas for Latin America - Cardinal Health for US - Tema for Italy - THP for Austria - Biokosmos for Greece - Septinta for Baltics countries and Radio Spect for Malaysia!.

Major projects/partnerships/collaborations:

Its portfolio is supported by R&D team fully committed in research programs with several universities and academic centers across the world. This cooperation is a key factor to develop new radiopharmaceuticals keeping in mind a cost effective approach for radiopharmacies.

Key figures
