

MEDEX LONCIN

Medex Loncin has been created in 1999 to take-over the SAV activities from GE Healthcare when it stopped its manufacturing activities in Loncin. Medex is now active in designing, manufacturing and commercializing worldwide digital X-RAY imaging systems in the medical, veterinary and industrial fields.

Expertise

Medex is mainly active in the direct digital radiography imaging systems (DDR) while it also designs, manufactures and sells other x-ray technologies (analogic and cr). In this respect Medex has developed its own imaging software. Medex has also developed and manufactures a remote control positioner in OEM for a large foreign manufacturer.

Target

- Medical field : mainly emerging and developing countries Tier 1 and Tier 2 health infrastructures
- Veterinary field : European markets
- Industrial field : NDT and security application worldwide

Major projects/partnerships/collaborations

- Projects : development of new version of the medical and veterinary imaging systems
- Partnership : OEM agreements with large x-ray systems manufacturers
- Collaboration : several new product developments supported by the Walloon region and development of a cad system with a German company.

Key figures

- Created in 1999
- 40 people (10 engineers)
- ISO 9001:2000
- ISO 13485:2003
