

OMEGA RISK

Omega Risk is an independent Audit & Advisory practice founded in 1997. It is a specialized practice, focused on security and resilience issues faced by large corporations and organizations.

The risk domains include all issues of malicious origin with a special emphasis on the critical infrastructure in general and on telecom, nuclear, energy and data centre protection in particular.

Omega Risk acts completely independently of insurance companies, large multi-disciplinary consulting firms, potential suppliers of security systems or services, subcontractors or any other entities, who may benefit from the advice provided by the practice.

Omega Risk is managed by ir. Yvan De Mesmaeker who has over 20 years of experience in advising the nuclear sector on security related matters.
