

TELEMIS

Telemis is building top-notch medical image management solutions.

With Telemis, you can **compare measures, compare data sources and compare opinions**. We are proud to help doctors take valid decisions for the patient by bringing them more **diagnostic** tools and quantitative data, more **multimedia** sources, and more **collaboration**.

TM-MACS: Our MACS Technology (Multimedia Archive and Communication System) extends traditional PACS outside of radiology to all the other clinical departments (f.i. ophthalmology, dermatology, cardiology, operating rooms, emergencies, anatomopathology). It supports all image and video formats and manages imaging markers and provides patient follow-up tools, as well as collaboration solutions.

It can be considered as complementary to an existing PACS that handles DICOM, or the full solution for all medical imaging.

TM-Microscopy: provides anatomopathology departments with a solution to archive and share macro, micro and full scan both inside and outside of the department.

INTUITUS: is a management tool that provides a clear vision on how to optimize healthcare institution efficiency and quality. It starts with imaging department and grows to other non-medical-technical departments.

All products are associated with high quality services provided by local and trained engineers. Our services include project management, installation and set-up, software integration, training, support and upgrades, as well as consultancy.

Target

Healthcare institutions (hospitals and clinics) worldwide.

Key figures

- Turnover: € 7.757.899 (FY 2017)
- Earnings before tax: € 915.648 (FY 2017)
- Number of employees: 60
