

TRANSRAD NV/SA

Transrad was founded on January 18th, 1988. Supported by its shareholders (National Institute for Radioelements (IRE) and NCT (SA), it has become one of the leading companies active in the field of radioactive and nuclear transport.

Expertise

Transrad organizes the worldwide transport (and forwarding) of nuclear, radioactive and related material.

A fleet of over 30 vehicles (vans, trucks and trailers) specially designed and equipped (satellite tracking, security installations, ...) and a dedicated team of 17 drivers with specific training, approved by the competent authority, for the transport of radioactive and nuclear substances, are daily on the road delivering radioisotopes to the pharmaceutical companies all over the world.

Target

- Radioisotope production facilities (and related companies in the fuel cycle)
- Radiopharmaceutical companies
- High radioactive sources for sterilization
- Control equipment

Major projects /partnerships/collaborations

In collaboration with the different customers and partners, Transrad is continuously looking to give the best service at the best rate. Developing other and better ways to protect the worker, the public and the environment against radiation during transport.
